MySQL

SUMMARY

I am a passionate and detail-oriented C/C++ programmer and frontend developer with a strong foundation in both low-level programming and modern web technologies. My expertise lies in building efficient, optimized solutions using C/C++, and creating interactive, responsive user interfaces using HTML, CSS, and JavaScript. I enjoy solving complex problems and bringing creative web experiences to life through clean and maintainable code.

PROJECTS

- This is a responsive website for a local coffee shop that I developed using HTML, CSS, and JavaScript. The website features a menu, location information, and an online ordering system. I used Bootstrap to ensure that the website was mobile-friendly

- This is a full-stack web application that I developed using Node.js, Express, and MongoDB. The application allows users to create, read, update, and delete items from a database. I used EJS for the front-end and implemented user authentication using Passport.

- This is a single-page application that I developed using React. The application allows users to search for recipes and save them to a personal recipe book. I used the Edamam API to retrieve recipe data and implemented Redux for state management
